Objective

AI/ML-focused Computer Science student with hands-on experience building LLM-driven applications, Python-based automation, and data pipelines. Skilled in model experimentation, RAG-based approaches, and rapid prototyping, seeking an AI/ML engineering internship to contribute to production-grade, intelligent automation solutions.

Experience

Edunext Technologies Pvt. Ltd. Delhi NCR, India

Software Engineer Intern – AI-Powered Analytics Systems *Apr 2026 – May 2026*

- Developed an AI-powered finance analytics platform integrating Power BI dashboards with a hybrid rule-based and LLM-driven conversational chatbot for natural language analytics.
- Designed and tested 10+ scalable FastAPI endpoints (validated via Postman) and JSON-based data pipelines to process 50,000+ student fee records, enabling dynamic queries across collections, concessions, waivers, and pending fees.
- Implemented intelligent query planning, context-aware follow-up handling, and automated chart generation, reducing manual reporting effort by 80% while enabling data-driven decision-making across a multi-tenant deployment spanning 20+ schools in India.

IEEE Bangalore Section Bangalore, India

Artificial Intelligence Intern - OncoVision-Early Cancer Detection *Apr 2025 – Aug 2025*

- Developed a dual-output deep learning model using EfficientNetB0 to classify eight cancer types and detect malignancy from histopathological images.
- Achieved 97.99% accuracy in cancer classification and 98.13% in malignancy detection through transfer learning, regularization, and two-phase training.
- Implemented systematic model experimentation and performance evaluation (accuracy, precision, recall) across transfer learning configurations.

Projects

ScholarSync–Full Stack School Management Platform | *Node.js, Express, MySQL* Dec 2025 – Jan 2026

- Architected and deployed a scalable backend system using Node.js and Express.js to manage 75+ student records, attendance tracking, and curriculum progress with full CRUD operations.
- Designed and implemented RESTful APIs with dynamic query filtering (branch/class-based) and integrated a cloud-hosted MySQL relational database on Railway using connection pooling and environment variable configuration.

Bank Management System | *Java (Swing, AWT), MySQL* Aug 2024 – Nov 2024

- Developed user-friendly interfaces using Java Swing and AWT, enabling seamless customer interactions for account management, transactions, and loan processing.
- Integrated MySQL database with Java to handle real-time data storage and retrieval, ensuring secure, data integrity and efficient database operations for customer information.

Technical Skills

Languages: Python, Java, C, MySQL, JavaScript
Frameworks & Libraries: React, Node.js, Express.js, NumPy, Pandas, Matplotlib, Scikit-learn, Tensorflow
AI/ML: achine Learning, Deep Learning, Model Training, Transfer Learning, LLM, RAG, Generative AI
Developer Tools: Git, GitHub, Linux CLI, VS Code, NetBeans, PowerBI
Concepts: Data Structures & Algorithms, REST APIs, OOP, DBMS, Operating Systems

Education

Christ (Deemed to be University) Kengeri, BLR, KA

Bachelor of Technology in Computer Science (AIML) CGPA: 8.5 *Jul. 2023 - Apr. 2027*
Minors in General Management

St. George's School Alaknanda, DL

CBSE (12th - 88.8%) *Apr. 2022 - Feb 2023*

Achievements

Solved **200+ Data Structures and Algorithms problems** on **LeetCode**, covering arrays, strings, recursion, and algorithmic patterns, improving problem-solving and coding efficiency.
